

CLAIMS

[Claim(s)]

[Claim 1] A culturing method of a medicinal ginseng callus carrying out the passage of the callus which makes a medicinal ginseng origin vegetation to a culture medium of different conditions.

[Claim 2] A culturing method of a medicinal ginseng callus of claim 1 with which a culture medium of different conditions consists of combination of a culture medium which promotes production of a culture medium and saponin suitable for growth of a callus.

[Claim 3] A culturing method of a medicinal ginseng callus of claim 2 whose culture medium suitable for growth of a callus is a culture medium which added naphthaleneacetic acid as a plant growth-regulating substance to a basal medium and whose culture medium which promotes production of saponin is a culture medium which added gibberellin as a plant growth-regulating substance to a basal medium.

[Claim 4] A culturing method of claims 1 and 2 or a medicinal ginseng callus of 3 ** make one culture medium into a primary culture medium, and using a culture medium of another side as a secondary culture medium.

[Claim 5] A culturing method of a medicinal ginseng callus of claim 4 which is cultivated one more or more generation and carries out the 3rd [a total of] generation [more than] passage by primary culture medium and/or a secondary culture medium
